## DETAILED ACTION

### *Allowable Subject Matter*

**Claims 1, and 3-11(Renumbered 1-10) are allowable.**

The following is an examiner's statement of reasons for allowance: In response to Remarks and claim amendments made in Applicant's Request for Continued Examination submitted 01/09/2006, and, upon conclusion of a comprehensive search of the pertinent prior art, the Office indicates that the claims, as amended, are allowable. Regarding claim 1, patentability exists, at least in part, with the chassis further having an opening in a bottom surface thereof, where the bottom surface and the window lie in intersecting planes; and a clamp configured to fit over the window of the chassis and press against an extension of the bracket of the card, wherein the system is configured so that when the card is installed in the computer system, an extension of the bracket of the card protrudes through the window of the chassis, and the clamp presses against the extension to secure the card in place between the clamp and the locating plate of the chassis and a lower end of the bracket extends through the opening in the bottom surface of the chassis.

Regarding claim 7, patentability exists, at least in part, with a clamp configured to fit over the window of the chassis and press against an extension of the bracket of the card, wherein when the card is installed in the computer system, an extension of the bracket of the card protrudes through the window of the chassis and the clamp presses against the extension to secure the card in place, and further when the card is installed a lower end of the bracket protrudes from an opening in a bottom surface of the chassis,

Art Unit: 2841

where the bracket of the card intersects the bottom surface of the chassis when installed.

Cranston, III et al US Patent 6138839 and Itai et al US Patent 6160712, and Chen US Patent 6655761 are cited as pertinent prior art teaching embodiments of a lower end of a card bracket protruding through an opening in a slot panel assembly mounted inside of a chassis. However, the cited prior art does not fairly teach or suggest wherein the lower end of the card bracket protrudes through an opening in the bottom surface of the chassis.

Beaman US Patent 6278614, Lin US Patents 6384766 and 6693800 are also cited as disclosing embodiments teaching a computer chassis with at least one slot opening and a window above the slot opening, the slot opening corresponding to an interface for a card to be installed into the computer system; and a clamp configured to fit over the window of the chassis and press against an extension of the bracket of the card.

The prior art taken alone, or, in combination, does not fairly teach or suggest all the limitations arranged in the manner as claimed by the Applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dameon E. Levi whose telephone number is (571) 272-2105. The examiner can normally be reached on Mon.-Fri. (9:00 - 5:00).
